{57} Abstract:

PROBLEM TO BE SOLVED: To obtain web site construction system and method capable of constructing a web site cooperated with a data base without executing program ming and a storage medium recording a program for web site construction processing.

SOLUTION: The system is provided with a web site construction tool 11 for preparing information for specifying a relational data base(RDB) and a table in the RDB on the basis of interactive operation with a user by a GUI and storing the prepared information in a site information file 14, a web page design tool 12 for preparing a web page file 13 displayed by a www browser on the basis of the interactive operation with the user by the GUI and padding DB information for specifying the table of the RDB which is to be operated from the browser in the file 13 and a CGI program 15 started from a web server program so as to execute processing for the table requested from the browser by accessing the RDB table specified by the DB information in the file 13. Thus the system constructs a web
